EXPLORATORY LAND-COVER CHANGE ASSESSMENT

Abuja, Nigeria | Landsat 2002–2017

MAP 1: LANDSAT 2002 — FALSE COLOUR COMPOSITE

MAP 2: LANDSAT 2017 — FALSE COLOUR COMPOSITE

METHODOLOGY

Landsat Collection 2 Level-2 imagery for 2002 and 2017 was acquired from USGS EarthExplorer, composited, clipped to the FCT boundary, and quality-masked with QA_PIXEL for exploratory visual comparison.

DATA SOURCES

- Landsat 7 ETM+ C2 L2 — 30 Dec 2002
- Landsat 8 OLI/TIRS C2 L2 — 14 Feb 2017
- FCT boundary — geoBoundaries ADM1
- Source portal — USGS EarthExplorer
- Spatial resolution — 30 m

MAP INFORMATION

CRS: WGS 1984 UTM Zone 32N
Projection: Transverse Mercator
Datum: WGS 1984
Pixel size: 30 m
Software: ArcGIS Pro
Status: Exploratory / not validated

LIMITATIONS / NOTES

The unsupervised classification workflow was explored, but class outputs did not pass consistent visual validation across both dates. Quantitative class-change estimates are therefore not presented as final results. This layout documents the preprocessing and comparative remote-sensing workflow.
